# Nguyen Dao Son

## Full-Stack Developer Intern

0395665937 ndson.se@gmail.com github.com/NguyenSonnt04 linkedin.com/in/ndson-se Thu Duc, TP. HCM

## SKILLS

| | |
|---|---|
| **Languages:** | Java, HTML5, CSS3, JavaScript (ES6+), SQL. |
| **Frameworks/Libraries:** | Next.js, Node.js, Spring Boot. |
| **Backend & Security:** | RESTful API, JWT, OAuth 2.0. |
| **Database:** | MongoDB, MySQL, SQL Server, PostgreSQL. |
| **Tools & Platforms:** | Docker, Git, Postman. |

## EDUCATION

**Ho Chi Minh City University of Technology** 2022 - Present

TOEIC 550

GPA : 3.1 / 4.0

## SUMMARY

Fullstack Developer with experience building web applications using Java Spring Boot, Node.js, and Next.js. Skilled in designing RESTful APIs, integrating AI services, and developing responsive user interfaces with seamless frontend-backend interaction. Interested in scalable and efficient backend systems.

## PROJECTS

**AI Image Generation & Editing Platform | Fullstack Developer** 2025 - 2026

**Overview: Developed an AI-driven image generation and editing web application using Next.js, Node.js, and MongoDB**

**Key Achievements:**

- Built responsive user interfaces using Next.js with API integration for AI image generation features
- Designed asynchronous image processing pipeline using Node.js, reducing blocking time by 30% and improving system responsiveness
- Integrated multiple external AI services (Gemini, Replicate, remove.bg) through a unified service layer
- Implemented authentication using JWT and OAuth2 and managed media storage with Firebase

**Technologies:** Next.js, Node.js, MongoDB, Firebase Storage, Gemini API, Replicate, remove.bg.

**AI-Powered Recruitment Management System | Fullstack Developer** 2026 - 2026

**Overview: Developed an AI-powered system to automate recruitment workflows, including CV creation, evaluation, and candidate-job matching.**

**Key Achievements:**

- Designed a backend workflow to transform unstructured input into structured CV data using AI services
- Built a candidate-job matching and ranking system combining rule-based logic and AI integration, reducing manual screening time by 70%
- Developed and documented RESTful APIs using Spring Boot and Swagger for real-time recruitment workflows
- Containerized backend services and database using Docker for consistent and scalable deployment

**Technologies:** Java Spring Boot, Docker, MySQL, AI APIs.
