Nguyen Dao Son

Cloud Developer Intern

0395665937 ndson.se@gmail.com github.com/NguyenSonnt04 linkedin.com/in/ndson-se Thu Duc, TP. HCM

SKILLS

Languages:	Java, JavaScript (ES6+), SQL.
Frameworks/Libraries:	Next.js, Node.js, Spring Boot.
Backend & Security:	RESTful API, JWT, OAuth 2.0.
Database:	MongoDB, MySQL, SQL Server, PostgreSQL.
Cloud & DevOps:	AWS (EC2, S3), Docker, Git
Tools:	Postman.

EDUCATION

Ho Chi Minh City University of Technology 2022 - Present

TOEIC 550

GPA : 3.1 / 4.0

SUMMARY

Backend Developer with strong foundation in building RESTful APIs using Node.js and Spring Boot. Experienced in designing scalable systems and working with asynchronous processing and Docker. Familiar with basic AWS services (EC2, S3) and highly motivated to learn and build cloud-based solutions.

PROJECTS

AI Image Generation & Editing Platform | Backend Developer 2025 - 2026

Overview: Developed an AI-driven image generation and editing web application using Next.js, Node.js, and MongoDB

Key Achievements:

- Built responsive user interfaces using Next.js with API integration for AI image generation features
- Designed asynchronous image processing pipeline using Node.js, reducing blocking time by 30% and improving system responsiveness
- Integrated multiple external AI services (Gemini, Replicate, remove.bg) through a unified service layer
- Integrated AWS S3 for handling scalable image storage.

Technologies: Next.js, Node.js, MongoDB, Firebase Storage, Gemini API, Replicate, remove.bg.

AI-Powered Recruitment Management System | Backend Developer 2026 - 2026

Overview: Developed an AI-powered system to automate recruitment workflows, including CV creation, evaluation, and candidate-job matching.

Key Achievements:

- Designed a backend workflow to transform unstructured input into structured CV data using AI services
- Built a candidate-job matching and ranking system combining rule-based logic and AI integration, reducing manual screening time by 70%
- Developed and documented RESTful APIs using Spring Boot and Swagger for real-time recruitment workflows
- Containerized backend services and database using Docker for consistent and scalable deployment.

Technologies: Java Spring Boot, Docker, MySQL, AI APIs.
